

VALUE-BASED CARE

MIPS Quality Reporting

Are you concerned about the ever-changing MIPS program and the impact on your reimbursement?

Sharecare realizes the importance of working alongside providers to increase reimbursement rates and reduce administrative burden by applying our experience and technology to the unique rules and requirements of the CMS MIPS Program.

We know providers want to focus on patient care rather than becoming experts in CMS quality reporting. But unfortunately, successful practices don't have time to navigate the ever-changing landscape of reimbursement and micro-manage their quality reporting.

The challenge:

Staying abreast of significant MIPS Program changes

CMS MIPS changes every year, and visibility of the changes can be delayed, so providers may not have ready documentation for the metrics they're measured against. As an approved MIPS registry provider, we make sure you have the right plan in place year after year.

The Sharecare Value-based Care Platform makes you value-based ready

Our MIPS partnership provides the digital infrastructure for value-based contracting with commercial payors and self-insured employers.

Through the integration, aggregation, calculation, and reporting for these existing programs, providers become "value-based ready" for other VBC-based programs such as ACO and bundled payments.

Our technology illuminates gaps in care and focuses the care team on areas that hold the most value to the practice bonus and eventual patient outcome.

Our clients achieve exceptional performance and reporting results.

Here's how:

- As a CMS registry and QCDR, we examine all available measures and help select the best measures for your practice.
- Your performance and progress is monitored for the selected measures at the total practice level as well as by provider, measure, and patient.
- We provide reporting totals and results so you can easily manage and track performance.
- We deliver this information in dashboards and reports that are updated daily.
- For orthopaedic practices, Sharecare partnered with The Hawkins Foundation creating exclusive ortho-specific quality measures covering orthopaedic surgery and physical therapy.

Sharecare is the exclusive provider of these measures via our CMS Quality Clinical Data Registry (QCDR).
